## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 14-17, drawn to a switched-capacitor operational amplifier, classified in class 330, subclass 9.
- II. Claims 5-13 and 18-21, drawn to a pipelined analog-to-digital converter, classified in class 341, subclass 155.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the pipelined analog-to-digital converter does not need the particulars of the sample-and-hold circuit or the residual gain generator circuit that contains the switched-capacitor operational amplifier circuit. The subcombination has separate utility such as the switched-capacitor operational amplifier circuit of an electronics system or audio system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
